## EDUCATION

### University of Alberta

Edmonton, AB

Bachelor of Science in Computer Science, Minor in Mathematics

Expected May 2027

GPA: 3.3 / 4.0

**Coursework:** Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering (SDLC), Web Development

## TECHNICAL SKILLS

**Languages:** Python, Java, C, C++, C#, JavaScript, TypeScript, SQL, HTML/CSS, Assembly

**Frameworks & Backend:** React, Next.js, Node.js, Flask, FastAPI, Django, TailwindCSS, REST APIs, WebSocket

**AI / ML:** LangChain, LangGraph, PyTorch, scikit-learn, RAG, GraphRAG, LLM fine-tuning, MCP, embeddings

**Databases:** PostgreSQL, MongoDB, DynamoDB, NoSQL, Firebase (Firestore), SQLAlchemy, ChromaDB, FAISS, vector databases

**DevOps & Tools:** Git/GitHub, Docker, CI/CD (GitHub Actions), AWS, GCP, Linux, Agile/Scrum, pytest, JUnit

**Libraries:** pandas, NumPy, Matplotlib

## EXPERIENCE

### Applied AI/ML Software Developer Intern

May 2025 – August 2025

FPT Software

Hanoi, Vietnam

- Cut RAG response latency by 35% by building a streamable HTTP MCP server for OpenAI integration, containerized with Docker for modular deployment.
- Increased vector retrieval throughput by 42% by optimizing an end-to-end LangChain and ChromaDB pipeline serving the production chatbot.
- Boosted answer precision by 18% over a standard RAG baseline by designing and implementing a GraphRAG-based retrieval system with knowledge-graph-augmented context.

### Software Developer Intern

June 2024 – August 2024

CodeDream Education

Hanoi, Vietnam

- Streamlined scheduling and resource management for 50+ classes across 4+ education centers by building a full-stack admin dashboard with React, TypeScript, and FastAPI REST APIs.
- Reduced submission and grading latency by 20% for 400+ students by refactoring a legacy PHP-based online judge (CDOJ) and adding pytest-based test coverage on the grading pipeline.
- Deployed an AI-generated-code detection classifier into the judge's submission pipeline by fine-tuning a CodeLlama-based model on student submission data and serving it via a Flask REST endpoint.

### Software Developer Intern

May 2023 – September 2023

DIBIZ – Digital Business

Hanoi, Vietnam

- Cut processing time by 15% on a daily RabbitMQ stream serving 500,000 customers by redesigning batch consumer logic and message-handling algorithms in Python.
- Shipped 10+ RESTful API endpoints and an embedding-based user preference scoring pipeline powering personalized promotions for daily active users.

## PROJECTS

### CoverPilot | React, Python, Django, LangChain, Firebase, Docker, GCP, AWS S3

January 2026 – April 2026

- Architected a full-stack platform with a React + Vercel frontend, a Dockerized Django backend on Google Cloud, Firebase Auth with saved drafts, and PDF/DOCX document export backed by AWS S3 storage and Firestore metadata.
- Built a resume ingestion pipeline that parses uploaded resumes into a structured user profile (experience, education, skills), reusable across multiple tailored documents.
- Designed a LangChain-based generation engine that tailors resumes and cover letters to a target job posting using the user's parsed profile, with an interactive AI editing layer returning suggestions in ~2-5 seconds and accept/reject control.

### TalkFlow | Next.js, TypeScript, Python, Flask, Wave, FasterWhisper, FAISS

June 2025 – August 2025

- Built a full-stack meeting platform with channels and real-time messaging, audio, and video over WebSocket, supporting concurrent multi-user sessions.
- Streamed live audio to a Python backend via WebSocket and implemented a real-time speech-to-text pipeline with FasterWhisper.
- Achieved sub-15ms conversation memory retrieval by integrating a FAISS-based vector store, enabling end-of-meeting AI-generated summaries.
