EDUCATION

University of Alberta

Edmonton, AB

Bachelor of Science in Computer Science, Minor in Mathematics

Expected Dec. 2027

- **Coursework:** Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering (SDLC), Web Development

EXPERIENCE

Applied AI Software Developer Intern

May 2025 – Aug. 2025

FPT Software

Hanoi, Vietnam

- Built a streamable HTTP MCP server for OpenAI tool integration, containerized with Docker, **cutting end-to-end response time by ~35%** on an internal chatbot
- Optimized the LangChain and ChromaDB retrieval pipeline with an embedding cache, eliminating redundant re-embedding and **increasing query throughput by ~40%**
- Prototyped a knowledge-graph-augmented retrieval layer (GraphRAG), improving answer accuracy **~18%** over the existing RAG baseline across a **100-question** evaluation set

Software Developer Intern

June 2024 – Aug. 2024

CodeDream Education

Hanoi, Vietnam

- Replaced a manual spreadsheet scheduling workflow with a React and TypeScript admin dashboard on FastAPI, streamlining operations for **50+ classes** across **4 education centres**
- Profiled and refactored a legacy PHP and Python judging system behind new pytest coverage, cutting grading latency **20%** for **400+ students**
- Fine-tuned and deployed a CodeLlama classifier via Flask, flagging AI-generated submissions for instructor review, achieving **72% accuracy**

Software Developer Intern

May 2023 – Aug. 2023

DIBIZ – Digital Business

Hanoi, Vietnam

- Redesigned consumer batching and message-handling logic on a Python RabbitMQ pipeline, cutting daily processing time **15%** for a **500,000-customer** user base
- Built and tested the REST API endpoints serving a new embedding-based promotions system for an external telecom client, writing test coverage alongside each endpoint

PROJECTS

Fantasy Football | [GitHub](#) | *React, TypeScript, FastAPI, PostgreSQL, Redis, Docker, GCP*

Aug. 2026

- Built a fantasy football platform end to end (squad selection, transfers, live gameweek scoring, private leagues) on React, TypeScript, and FastAPI over PostgreSQL, containerized with Docker and shipped to Cloud Run through GitHub Actions CI/CD
- Added a Redis cache in front of the most frequent read queries, cutting player-search response time from **15ms to 6ms** at a **60%** hit rate
- Automated hourly ingestion from the official Premier League API and schema migrations as scheduled Cloud Run Jobs, keeping **587 player records** and the full fixture list current

CoverPilot | [GitHub](#) | *React, Django, LangChain, Firebase, Docker, GCP*

Jan. 2026 – Apr. 2026

- Built and deployed a full-stack document platform on React, Django, and GCP with Firebase Auth, Firestore draft storage, and PDF/DOCX export to AWS S3, serving **~500 users**
- Engineered an ingestion pipeline parsing uploaded PDF/DOCX resumes into a structured profile, reused across every generated document
- Built the edit-and-export pipeline on a JSON document representation, applying batched accept/reject edits to templated LaTeX and re-rendering to a PDF served from S3

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C, C++, HTML/CSS

Frameworks: React, Next.js, TailwindCSS, FastAPI, Django, Flask, Node.js, REST APIs, WebSocket

Databases: PostgreSQL, MongoDB, Redis, Firebase (Firestore), ChromaDB, FAISS

AI / ML: LangChain, RAG, GraphRAG, embeddings, MCP

Developer Tools: Docker, Git/GitHub, GitHub Actions (CI/CD), GCP, AWS, Linux, pytest, Agile/Scrum
